

First, you'll need to have a photo hosting web site such as <http://photobucket.com/> or <http://www.flickr.com/> where you can store (upload) your favorite pics. Of course you can use any web-hosting site of your choice. That means... if you have access to your own FTP (file transfer protocol) site/server you can upload pics to *that* site. Most importantly don't be intimidated, it's not that difficult.

After you have uploaded your photo/s, you will have to "point" to the photo by adding the URL (link or address) to the "insert link" button / drop down menu when in "posting" or "comment" mode. You can experiment with this while posting a comment. If it doesn't work for you, simply delete it and try again. Or at any time during your experimentation you can back track one step at a time by using the Ctrl Z keys on your keyboard.

Here we go...

In comment mode (where you write your text) – click on the LINK button, then on the INSERT LINK button. When you see the INSERT LINK *screen* with the title "Enter link details" you must do the following in the blank space provided... type this... ``

Be sure to insert the link to your photo (from flickr.com, etc...) **between** the quotation marks [``] with no spaces. The only space you should have is in the HTML img src tag.

Example: ``

Side note #1:

If you are having difficulty finding the URL address to your photo simply right click on the pic and "view image". Then look at the URL address at the top of the page in the navigation menu bar. This is the link you place between the quotation marks. Keep in mind that some photo hosting sites do not "share" photos. If this is the case, look in FAQ for instructions.

When you have added the link, click the "same window" button (under the title "settings") . Your photo should now appear with a blue linking frame around it. You want to remove this frame. So click off the pic (in the text area), and then on the pic again to highlight it. (you will see little white squares at the four corners and middle sections of the pic. You can use these to re-size it). If your photo is large and you don't re-size, it will be cut off when you click "POST" to finalize your comment. Resizing is trial and error.

Side note #2:

You might see some symbols when you have established your link... like these... ">/ Simply delete them like you would any text. They are of no consequence.

Hope this helps.....
